0measure_length (ImageJ macro)

Macro for multiple length measurements.

INPUT:
Structure of the data to be analysed:
• Serie of Images with extension .tif.

Modifications to do within the script:
• BEWARE the scale calculation is made for the Leica DMD 108 histology , you can change the values of "myscale" variable (in µm for 1000 pixels).

OUTPUT:

• Result file (default: analyse.txt) with the analysed file name, and for each file: mean value and all the values for the measured lengths.

Step 1: Choose an image

Step 2:
Draw a Line on the image,
Save the measurement (ctrl+M).
Repeat as many time as you want

Step 3: Three choices:
- **OK**
- **No, save the results**
- **Cancel**

Results are formatted
(4 measurements / line)
and saved in "analyse.txt"

Macro is aborted
(values are still in Results window,
1 measurement / line)
